Polish: 5

Farsi: 1

Who responded to our survey?

Participant Age Range

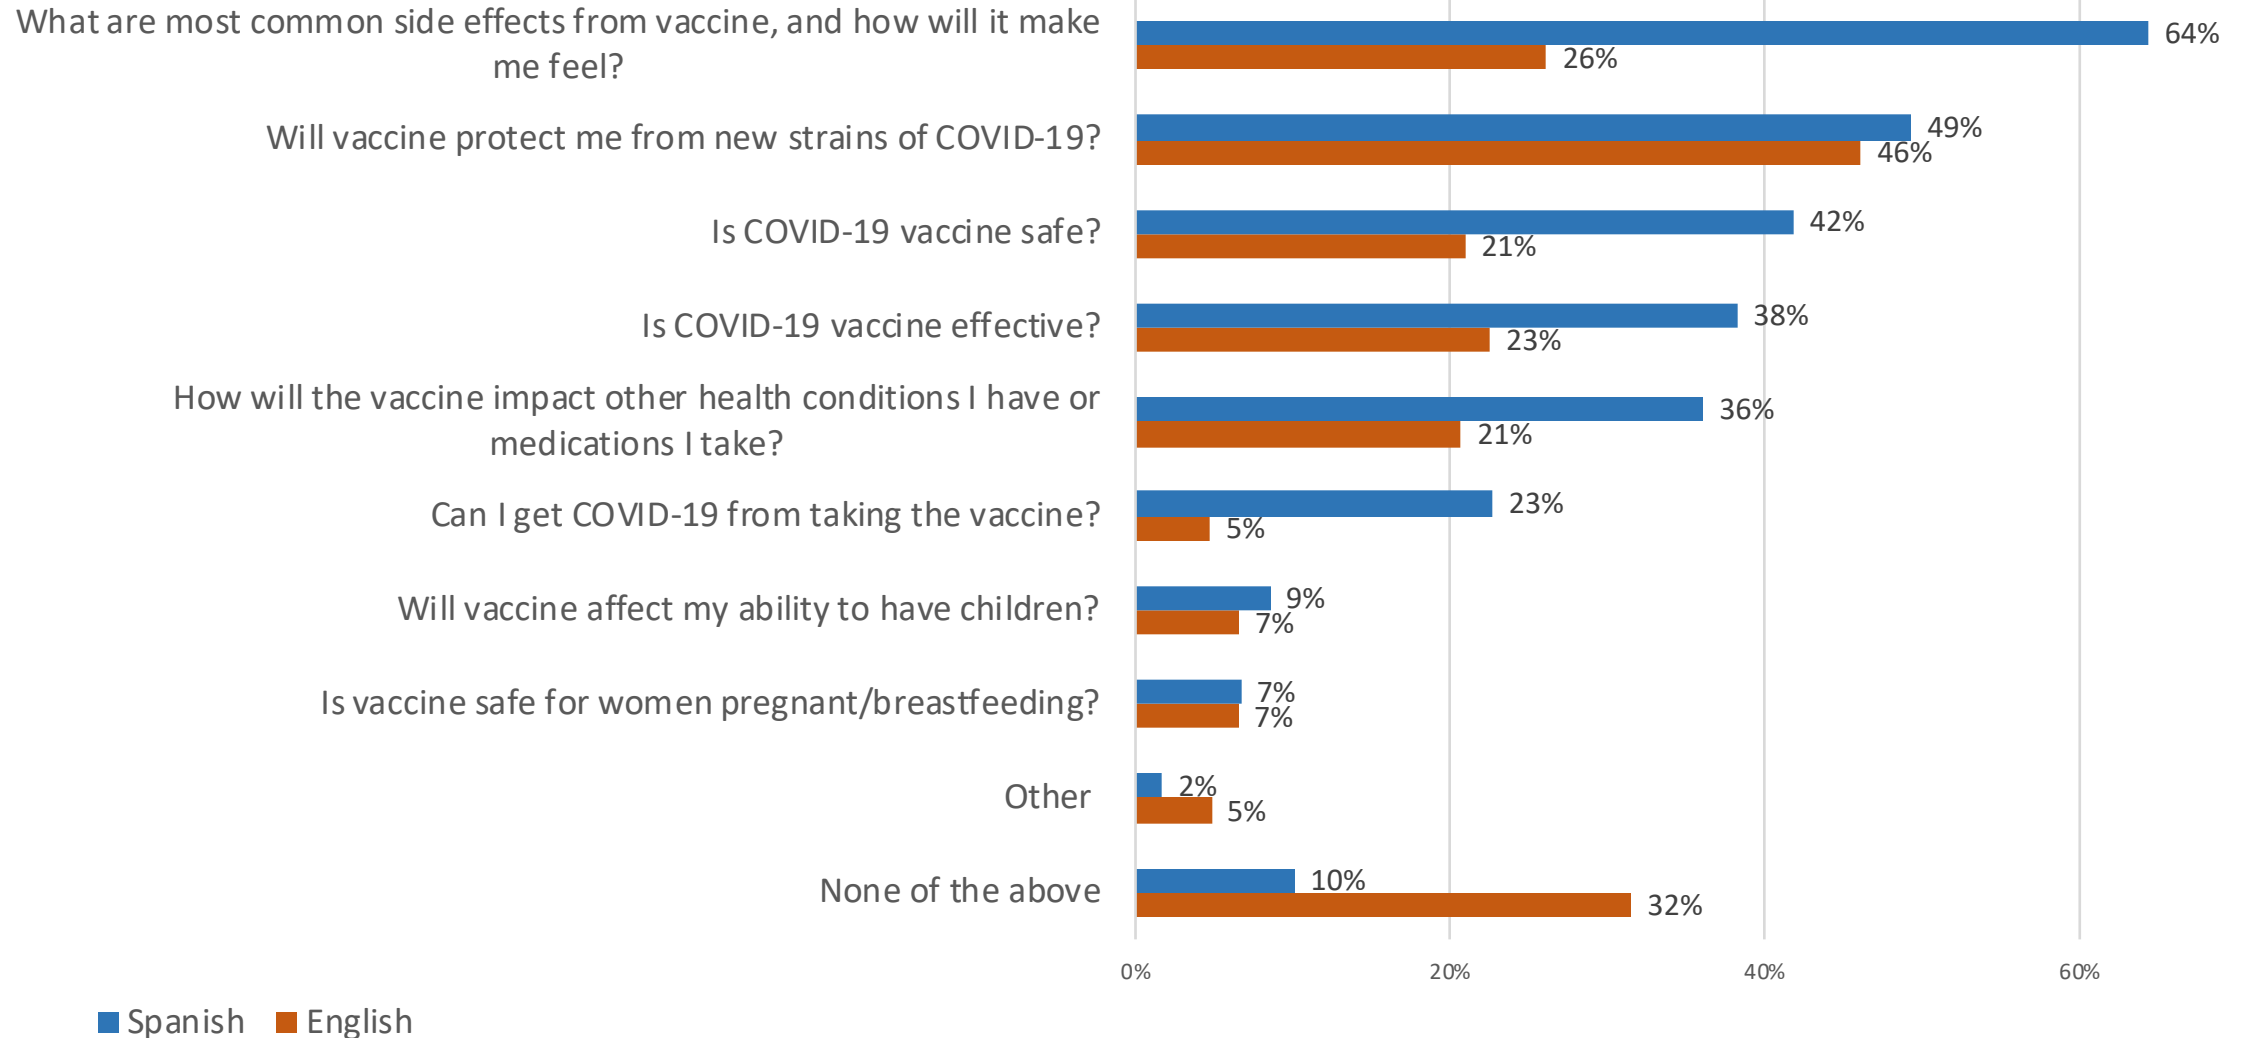

Participant Gender	#	%
Female	2413	65%
Male	1263	34%
Prefer not to say	53	1%
Non-Binary	10	.27%

Our sample is predominantly female and middle aged.

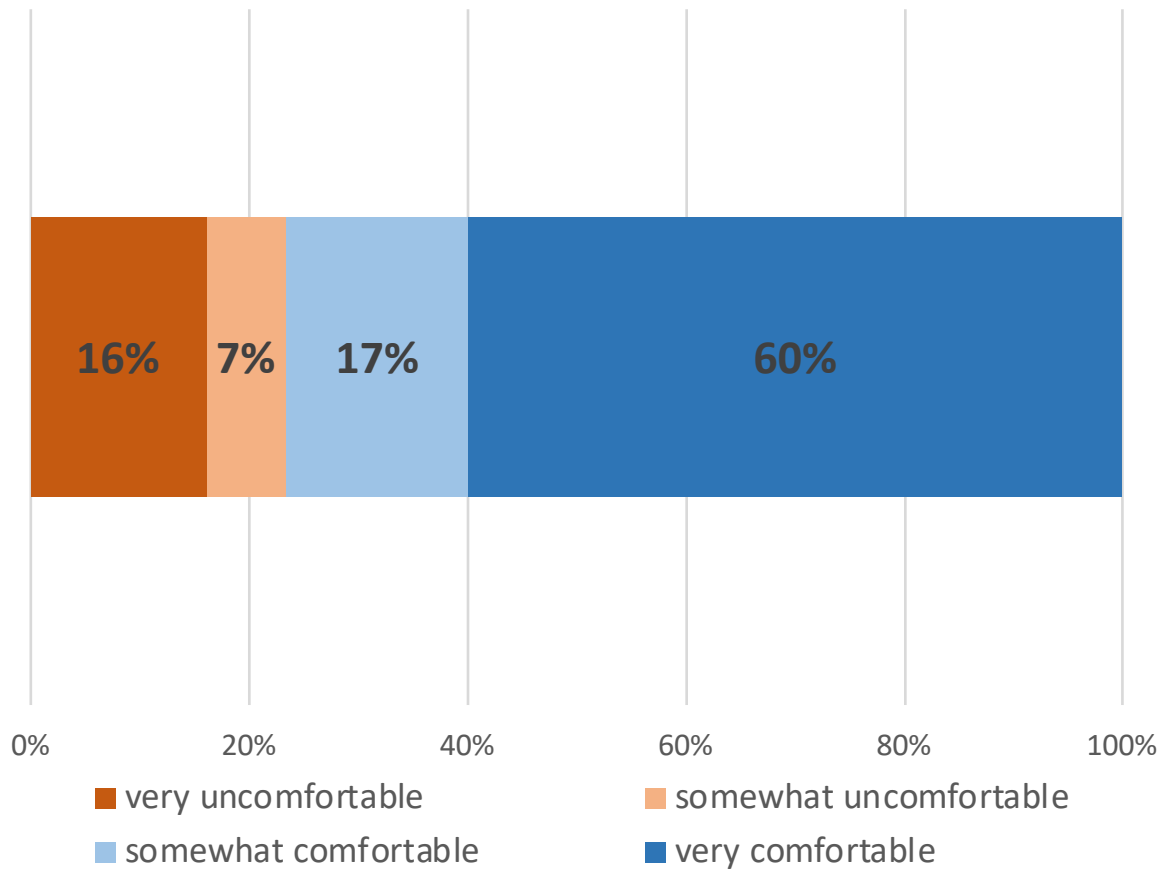

Data collected Feb 25-Mar 15, 2021

Which of the following HEALTH/SAFETY questions or concerns do you have about the COVID-19 Vaccine?

How comfortable do you feel getting the COVID-19 vaccine?

All Participants (n = 3739)

How likely are you to get the vaccine?

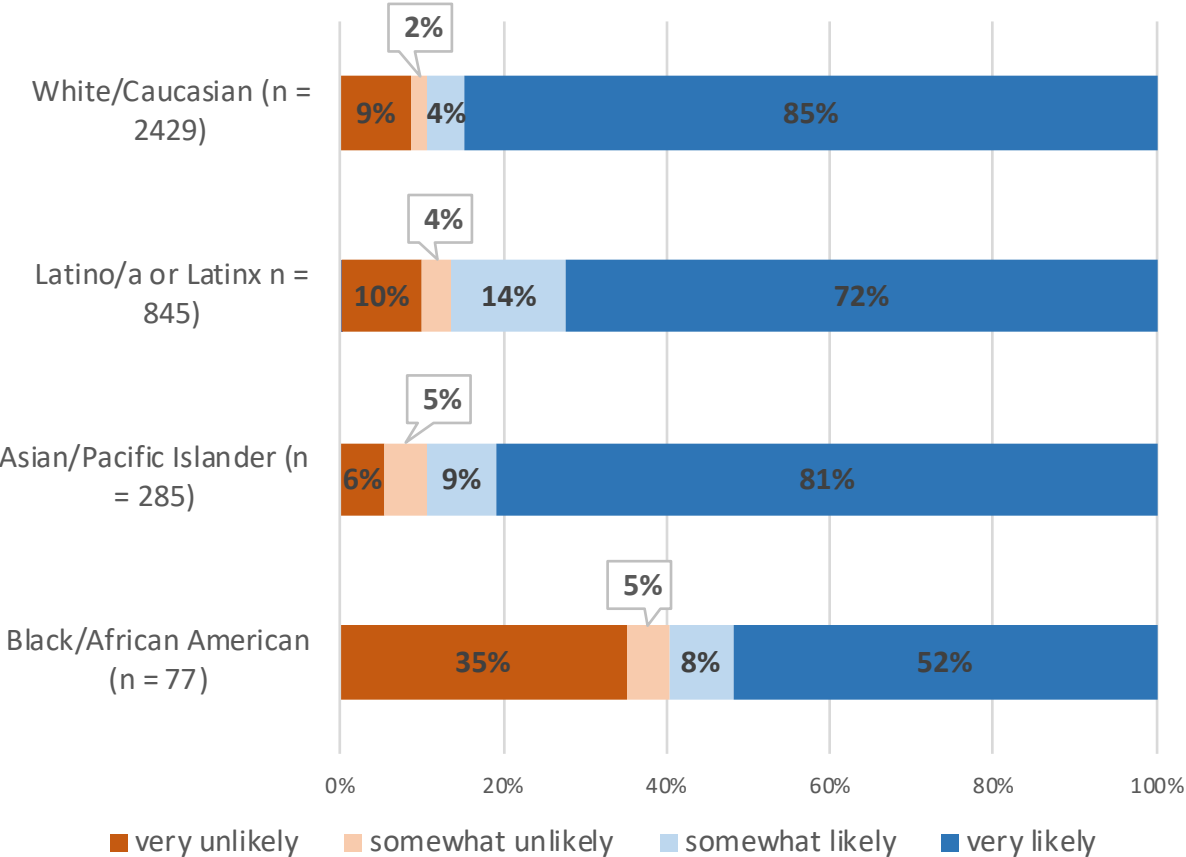

All Participants (n = 3739)

Black/African American respondents reported **stronger unlikelihood of getting vaccinated** as compared to general population or other subgroups

Limitation to note: Group size differences

Participants by Race/Ethnicity

Where do you get your health information?

All Participants

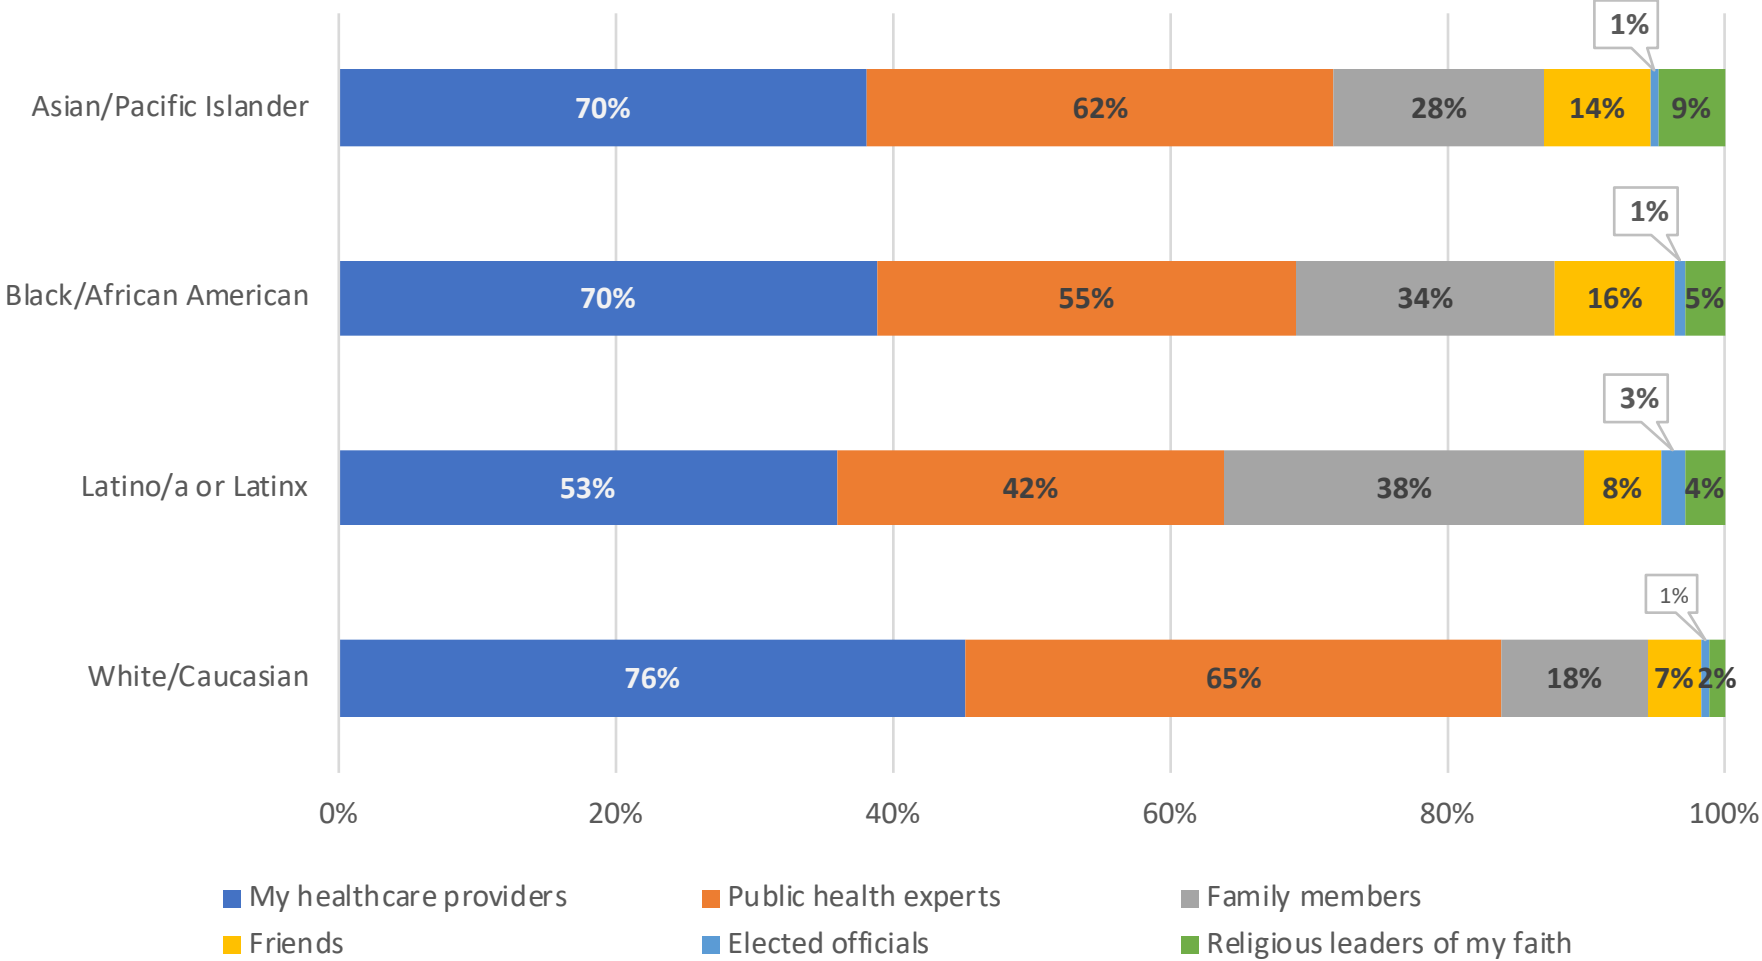

Where do you get your health information?

- **Internet, healthcare providers and television** were **top sources of health information** for all racial/ethnic groups
- **Latinx participants** endorsed **other (Spanish) language television** as their **top source of health information**

As you make personal decisions about getting the COVID-19 vaccine, whose opinion or feedback matters most to you?

Healthcare providers, public health experts and family members were the most endorsed trusted sources of information.

Elected officials opinions and feedback mattered little in decision making.

Next Steps

- Questions
 - **Learnings:** We have lower response rates within some communities than hoped for. What can we do in future efforts to **ensure an equitable response?**
 - **Moving Forward:** How can we best use survey findings for **planning and implementation?**
 - **Giving Back:** How can we **share findings** in ways that help the cause and partners?
- “To Do” Items
 - **Look across responses** in all languages for trends, similarities & differences.
 - **Connect findings with other information** sources (e.g. virtual town halls, focus groups).
 - Integrate findings with **PSA and Health Ambassador work.**
